

Template handover — Vanuit Ambacht quotation & invoice module

Version: 1.0 · 1 August 2026 **For:** development team (Ruchi) · **From:** Vanuit Ambacht (Tim & Bram) **Companion documents:** `Briefing-quotation-module-Vanuit-Ambacht-EN.pdf` (technical briefing, data model, image handling, digital approval) — this handover describes *the templates themselves*; the briefing describes *how the module around them should work*.

1. Answers to your two questions

1. Quotation design — which layout is leading? The generated PDF (and the online quotation) must match the **HTML templates in this package** exactly: a dark green cover page, white content pages, Playfair Display + Montserrat, embedded fonts and images — as in the reference PDFs. The "clean, white layout" you refer to is the **quote editor mockup** (`quote-editor-mockup-interactive-EN.html`): that mockup describes the *form inside the dashboard* and its mini page previews are schematic placeholders, not the print design. In short: **editor UI → follow the editor mockup and the visual-process document; generated PDF and online quotation → pixel-identical to the attached templates**. Nothing in the PDF should be white-only or simplified.

2. Garden room format — what is different? The garden room quotation (`buitenverblijf`) uses the same six-page structure and the same design system as the outdoor kitchen quotation, but with different content blocks: a floor-plan diagram instead of a cabinet diagram, three payment instalments instead of two, a provisional-sum (*stelpost*) marker with footnote, and an extra survey step in the process. All differences are listed in chapter 5. The **CRM field version** in this package (`Quotation-gardenroom-CRM-fieldversion-EN.pdf`) shows every dynamic field highlighted in orange; in its HTML the same elements carry `class="dyn"`.

2. What is in this package

Folder	File	Purpose
01-briefing	<code>Briefing-quotation-module-Vanuit-Ambacht-EN.pdf</code> / <code>.md</code>	Technical briefing v1.1: architecture, JSON data model, dynamic page 3, image handling, dynamic line items, digital approval button, acceptance criteria
01-briefing	<code>offerte-editor-visual-process-EN.html</code>	Supplement (12 Aug): dashboard editor in six steps, field mapping to JSON paths, calculation rules and conditional logic (options, finish field, conditional GRATIS badge, wood-type library)
01-briefing	<code>quote-editor-mockup-interactive-EN.html</code>	Interactive mockup of the editor UI (open in a browser). Reference for the form only, never for the PDF
02-quotation-outdoor-kitchen	<code>Vanuit-Ambacht-offerte-template.html</code>	Source of truth for the outdoor kitchen quotation (self-contained HTML, fonts and images embedded)
	<code>Offerte-OF-2026325-Bjorn-Valk-nieuw-ontwerp.pdf</code>	Reference output — the PDF your generator must reproduce
03-quotation-garden-room	<code>Vanuit-Ambacht-offerte-buitenverblijf-</code>	Source of truth for the garden room / canopy / poolhouse quotation

Folder	File	Purpose
	template.html	
	Offerte-0F-2026418-buitenverblijf-voorbeeld.pdf	Reference output
	Quotation-gardenroom-CRM-fieldversion-EN.pdf / .html	Same template with every dynamic field in orange (<code>class="dyn"</code>), English texts
	Offerte-buitenverblijf-CRM-veldenversie.pdf / .html	Same, Dutch texts (the texts the real document uses)
04-invoice	Vanuit-Ambacht-factuur-template.html	Source of truth for the invoice
	Factuur-F-2026-108-Bjorn-Valk-voorbeeld.pdf	Reference output
05-handover	this document	Field-by-field description of all three templates

All example data (customer names, addresses, amounts, project details) is fictitious and only illustrates the layout.

3. Shared design system (identical in all three templates)

- **Page:** A4, 210 × 296.7 mm per `<section class="page">`, `@page { size: A4; margin: 0 };`, `overflow: hidden` per page. Content margin 18 mm left/right.
- **Colours** (CSS variables at the top of each file, the only place colours are defined): `--green #3E4E36 · --green-soft #49593F · --green-deep #33412C · --charcoal #4A4A43 · --bronze #70624F · --sand #D6CFC2 · --sand-light #EAE5DC · --paper #F7F4EE · --ink #2E2E29 · --line #E3DDD2`.
- **Typography:** Playfair Display (headings, large amounts) and Montserrat 300–600 (everything else), embedded as base64 woff2. No external requests at render time.
- **Recurring elements:** running header (logo left, document number + customer right), running footer (brand · document number · page x / y), chapter kickers (01 · ...), dark green stat tiles, paper-coloured cards, check-icon lists, green total card, signature boxes.
- **Rendering:** headless Chromium (Puppeteer/Playwright/Browsershot) with `printBackground: true`, A4, zero margins. Do not use `wkhtmltopdf/dompdf`.
- **Images:** every photo sits in a fixed frame with `object-fit: cover` — see briefing chapter 5 for the frame sizes and the mandatory server-side processing.
- **Company details** (address, phone, e-mail, KVK, VAT, IBAN) are global settings, not per-document fields. Take them from the dashboard configuration so a change applies to all templates at once.

4. Template A — Outdoor kitchen quotation (offerte buitenkeuken)

Six pages, in this order: **1 Cover · 2 Personal note + Why us · 3 Configuration · 4 Investment · 5 Approval · 6 Process**. Chapter kickers run 01–06 across pages 2–6; page numbering "x / 6" in the footer (both must shift automatically if a continuation page is inserted).

Page	Element	Dynamic?	Notes
all	Quotation number, customer name, city, quotation date, valid-until date	Dynamic	Entered once, rendered everywhere (cover, headers, footers, validity badge, terms line, approval box)
1	Title "Uw buitenkeuken, op maat gemaakt."	Fixed	Standard text per product type
1	Subtitle spec line (wood type · size · recess)	Dynamic	
1	3 cover photos	Dynamic (defaults available)	Frame ± 69.5 × 52 mm
2	Salutation "Beste {first name},"	Dynamic	
2	Letter (4 paragraphs), team photo + caption, 4 USP cards	Standard text	Editable per quotation, normally unchanged
3	Page title "Jouw buitenkeuken in één oogopslag"	Fixed	
3	4 stat tiles (label / value / sub)	Dynamic	Value max ± 16 characters
3	Spec sections (1–5) with check lines (1–4 each)	Dynamic	Repeater; ± 12 lines total fit
3	Project photo / render	Dynamic	Frame 62 × 42 mm
3	Cabinet diagram ("Indeling vooraanzicht")	Dynamic	2–6 segments of type kastje (cabinet, doors icon) or uitsparing (recess, dark green with circle); measure line shows total width in cm; can be hidden
3	Info box (title + text)	Dynamic	± 220 characters
4	Page title "Heldere prijs, alles inbegrepen"	Fixed (default per product type)	Kitchen default; the garden room uses "Uw investering in één overzicht" (see chapter 5). Store as a per-product-type default so it can be changed centrally
4	Line items (title, description, qty, amount, inbegrepen flag)	Dynamic	"Inbegrepen" replaces the amount and excludes the line from totals
4	Totals (excl. VAT, VAT, incl. VAT)	Calculated	Never typed; NL notation € 3.495,00
4	Total-card note "Vaste prijs, geen verrassingen achteraf"	Fixed	
4	"Inbegrepen bij jouw investering" checklist (3–6)	Standard text	
4	Validity badge	Calculated	From valid-until
4	Payment terms: 2 instalments (50 % on approval / 50 % on delivery)	Dynamic	Percentages must sum to 100; amounts calculated

Page	Element	Dynamic?	Notes
5	Title "Zullen we hem gaan maken?", CTA text, buttons	Standard / fixed	Buttons carry company phone + e-mail from global settings
5	Customer name in signature box, terms line with date	Calculated	
6	5 process steps (approval → drawing → production → delivery → warranty)	Standard text	Badge "3 tot 5 weken" and delivery city are dynamic
6	Brand quote, change/extra-work boxes	Fixed / standard	

Additional behaviour defined in the 12 August supplement (applies to both quotation templates): options block (BBQ cutout / fridge / sink with tap, on/off per quotation, feeding stat tile 3, the cover subtitle, a specification line and optionally a line item), a free-text finish field rendered as a checklist line, the conditional GRATIS badge (only when the delivery line is € 0), a wood-type library that fills stat tile 2 + infobox + cover subtitle, and the delivery/build time as a single source field mirrored in the process badge. See [offerte-editor-visual-process-EN.html](#) , sections 04–06.

5. Template B — Garden room quotation ([offerte buitenverblijf](#) / [overkapping](#) / [poolhouse](#))

Same six pages and the same table as template A, **except:**

Page	Difference from template A
1	Title "Uw buitenverblijf, op maat gebouwd." (fixed); subtitle e.g. "Douglas hout · 8,00 × 4,00 m · overkapping met poolhouse" (dynamic); cover photos are renders/project photos of garden rooms
2	Letter and USP texts are the garden room variants (construction by certified specialists from the nationwide network, on-site build)
3	Page title "Jouw buitenverblijf in één oogopslag" (fixed); stat tiles typically: size / timber / roof / build time; spec sections typically: structure & foundation, roof & drainage, walls & frames, electrics & finishing
3	Floor-plan diagram ("Indeling plattegrond") instead of the cabinet diagram: 2–6 segments, dicht (enclosed, dark green) or open (covered, outlined), widths proportional to real dimensions, measure line shows total length in m; can be hidden
3	Photo frame on page 3 is a render of the design (dynamic, marked in the CRM field version)
4	Page title " Uw investering in één overzicht " (fixed — deliberately neutral because of provisional sums)
4	Provisional sums (stelposten): any line can be flagged stelpost: true → amount rendered with a trailing * and the footnote below the table appears: " ** Stelpost: dit bedrag is een zorgvuldige inschatting. We rekenen af op basis van de werkelijke kosten, altijd in overleg vooraf." The footnote is shown only when at least one line is flagged
4	Total-card note reads "Alle bedragen inclusief btw" (not "Vaste prijs...")
4	Payment terms: 3 instalments (40 % on approval / 40 % at start of build / 20 % on completion); the card grid switches to three columns; the last instalment is the remainder so the sum is exact

Page	Difference from template A
5	Title "Zullen we gaan bouwen?"; CTA text refers to the final design with technical drawing
6	Process steps: approval → design & technical drawing → on-site survey → the build (badge "2 tot 3 weken") → completion, warranty & aftercare; step 1 refers to "de akkoordpagina"

Everything highlighted orange in `Quotation-gardenroom-CRM-fieldversion-EN.pdf` is dynamic; everything else is fixed brand or standard text. The three page titles (cover, configuration, investment) are fixed.

6. Template C — Invoice (`factuur`)

One page (`Vanuit-Ambacht-factuur-template.html`), with an optional continuation page described as a commented block at the bottom of the file.

Element	Dynamic?	Notes
Invoice number, invoice date, due date, reference (quotation number)	Dynamic	Meta band with four values; due date = invoice date + payment term (default 14 days)
Title "Bedankt voor je vertrouwen, {first name}."	Dynamic (name)	Standard sentence with the first name inserted
"Factuur aan" block (name, address, postcode + city, phone)	Dynamic	From the customer record
"Factuur van" block (company details)	Fixed	Global settings
Line items	Dynamic	Same model and rendering as the quotation table, including "Inbegrepen"; typically copied from the approved quotation (or one instalment of it)
Totals	Calculated	As in the quotation
Payment box: IBAN, account name, "o.v.v. factuurnummer ..." badge	Fixed + dynamic number	IBAN and account name from global settings
Total card note "Betaaltermijn: 14 dagen" and due-date bar	Calculated	From the payment term
Personal note block	Standard text	Editable
Footer: company address · e-mail · website, page x / y	Fixed	
Overflow: more than ± 6 line items → continue the table on page 2 with the repeated table header; move the payment box, total card and personal note to the last page; numbering becomes 1 / 2 and 2 / 2	Rule	

Invoice-specific fields to add to the data model from the briefing: `factuur.nummer` , `factuur.datum` , `factuur.vervaldatum` , `factuur.referentie_offerte` , `factuur.betaaltermijn_dagen` , `factuur.status` (open / betaald / vervallen). Suggested numbering: `F-{year}-{sequence}` .

7. Checklist before you start

1. Use the three HTML files as the only design source; treat PDFs as the expected output.
2. Keep all CSS intact — only replace text nodes, image `src` values and repeatable blocks. Anything with `class="dyn"` in the CRM field version is a placeholder.
3. Build one generator with the JSON model as input (briefing chapter 3) and three template variants; page numbers and chapter kickers must be computed, not hardcoded.
4. Implement the image pipeline from briefing chapter 5 before wiring up uploads.
5. Verify against the acceptance criteria in briefing chapter 10 using the example data in the reference PDFs.
6. Questions about content or wording go to Tim & Bram; the templates and this handover are the authoritative reference for layout.
